UTS Subject Information

421048 Innovation Studio

Delivery:	Session 6 2026
Total Workload Hours:	300 hours
Credit Points:	12
Result Type:	Grade and marks

Subject Description

The Innovation Studio centres on a self-directed industry project where you will work as part of a multidisciplinary team to independently tackle business problems, crafting innovative solutions through data analytics that align with stakeholder requirements. You'll critically assess your approach, reflect on the process, and clearly present your innovative results.

Subject Learning Outcomes (SLOs)

1. Clearly define an industry problem with appropriate set of objectives (C.1)
2. Assess, adapt, and recommend the most suitable methodology to guide the industry project and plan to achieve defined objectives (C.1)
3. Synthesize a range of tools and techniques in order to design and develop creative and innovative solution to the identified industry problem (D.1)
4. Construct written, spoken, and visual communication with accuracy and clarity to effectively communicate innovative outcomes (E.1)
5. Critically evaluate, peer-review, reflect and communicate the learning process (F.1)
6. TBC (B.1)

Teaching and Learning Strategies

In this online subject, all students will conduct data analytics projects through teamwork. Each team will cover team responsibilities from three categories, including prominent responsibilities (e.g., methodology and project management), supportive responsibilities (e.g., code review and testing), and additional responsibilities (e.g., marketing). The allocation of these responsibilities needs to match the knowledge background of team members, such as IT, financial analytics, banking analytics, government analytics, risk analytics, and service analytics.
This subject offers a series of weekly online-learning topics and 1-hour workshops to help students self-develop their skillsets in facilitating data analytics/machine learning technologies to produce solutions for enterprise problems and innovations. The weekly online-learning topics will be hosted on Canvas for student, with concepts, methodologies, techniques, and examples for enterprise projects. The workshops will include guest seminars (including industry experience,

© University of Technology Sydney

specific strategies for technical developments and project management, etc.) and consultation (e.g., feedback, suggestions, and Q/A). Students are expected to be active in the workshops to enhance their skillsets in developing analytical projects.
Each team will offline define a specific analytical problem as a use case, and collaboratively develop an analytical project plan and design, and an analytical project report. Each member will report their individual performance and peer review other team members. Team members are requested to post their contributions to the project on the Group Discussion Forum, which will be used as the evidence for their individual performance and peer review reports.

Content (Topics)

- Introduction to data analytics projects
- Overview of data analytics/machine learning techniques
- Analytics system architecture and method selection
- Analytical solution development
- Evaluation and deployment of actionable analytical results
- Communication of analytical results to stakeholders

Required and Recommended Texts

All required and recommended texts for this subject are contained in the Reading List which you can access from the Canvas site menu.

Other Required Resources

If you have concerns about affording the course-related costs for this subject, UTS Financial Assistance can help you plan ahead or apply for grants or interest-free loans.

Minimum Requirements

To pass this subject, students must achieve an overall mark of 50% or greater.

Assessment task 1: Team Progress Report

© University of Technology Sydney

Description: This assessment is to provide opportunities for students to communicate with team members and coordinate individual progresses in a team basis, reflecting the team's learning experience, project development, teamwork, and individual contributions.
Team Progress Reports are required to be submitted weekly, from Week 2 to Week 11.
Team progress reports will be an important worklog for a team, recording the progresses of team construction and development, including allocating team responsibilities, learning and problem-solving experiences, project logs, teamwork and individual contributions, etc.
Importantly, team progress reports will be the evidence of teamwork and individual contributions for AT4.

Learning Outcomes:

- SLO4 Construct written, spoken, and visual communication with accuracy and clarity to effectively communicate innovative outcomes (E.1)

Type: Written submission

Groupwork: Individual

Weight: 10%

Length: >100 words for each report

Assessment task 2: Product 1: Analytics project plan and design

Description: This assessment is to train students to integrate domain-specific knowledge and business problems, and related data and resources with analytics/machine learning methods and processes to design desirable solutions. Through this task, students will develop skills of critical thinking and analysis of appropriate state-of-the-art analytics technologies to address challenging real-world business problems and objectives.
Part 1 of Product 1 (15%): An Analytics Project Plan and Design report
The report is required to follow a professional template of project reports, and address the following items:

- Background
- Business objectives
- Analytical goals and tasks
- Data and resources
- Analytical system architecture
- Analytical methods
- Experiments and evaluation methods
- Implementation design
- Expected outcomes
- Timetable with milestones
- Risk management

© University of Technology Sydney

- References

Part 1 of Product 1 is group work, and all team members are expected to work as a team and will receive the same marks reflected by the Analytics Project Plan and Design report.
Part 2 of Product 1 (15%): Project Plan Presentation
A presentation to present the team's analytics project plan and design, including the major contents of your report (Part 1 of Product 1).
The Part 2 will be scheduled before the due date of Part 1, and please appropriately elaborate Part 2's feedback given by the audiences to Part 1.
Each team member is required to deliver a part of this presentation, reflecting their contribution to the project. We will individually assess each team member, according to their presentation performance and team contributions.

Learning Outcomes:

- SLO1 Clearly define an industry problem with appropriate set of objectives (C.1)
- SLO2 Assess, adapt, and recommend the most suitable methodology to guide the industry project and plan to achieve defined objectives (C.1)
- SLO3 Synthesize a range of tools and techniques in order to design and develop creative and innovative solution to the identified industry problem (D.1)
- SLO4 Construct written, spoken, and visual communication with accuracy and clarity to effectively communicate innovative outcomes (E.1)
- SLO6 TBC (B.1)

Type: Written submission

Groupwork: Group, group and individually assessed

Weight: 30%

Length: Part 1: 1,000-3000 words, excluding references

Feedback: Part 2 of Product 1 will be assessed by lecturers within 2-3 weeks and the feedback will be provided later.

Assessment task 3: Product 2: Project analytical report

Description: This assessment is to train students with enterprise all-round and hands-on thinking, ability to effectively synergize cross-disciplinary knowledge, processes, skills, and experience to implement a project plan and design (Product 1) into analytical solutions to address enterprise challenges and innovations. Students are expected to make sense of enterprise data, evaluate results, improve the analytical design and strategies, deploy actionable analytical results, and communicate with stakeholders. Students will learn to develop industry-standard analytical systems, solutions, documentation, and communications.
Part 1 of Product 2 (25%): A Project Analytics Report

This report is required to summarize the activities, results, and findings in the analytical report with a professional template of industry project reports. The content of the report includes:

- Background including confirmed business objectives and analytical goals
- System Architecture and Models including implemented analytics/machine learning methods
- Experiments (for method selection, testing, and development)
- System Interface including data, user interface, results, and recommendations
- Deployment Plan
- Business Impacts
- References

Part 1 of Product 2 is group work, but we will individually assess each team member's contribution through a Spark+-based peer evaluation.
Part 2 of Product 2 (15%): Project Showcase
A showcase with all team members to present the team's analytics project report, particularly the implementation of the developed data analytical tool/system (Part 1 of Product 2).
The Part 2 will be scheduled before the due date of Part 1, and please appropriately elaborate Part 2's feedback given by the audiences to Part 1.
Each team member is required to deliver a part of this presentation, reflecting their contribution to the project. We will individually assess each team member, according to their presentation performance and team contributions.

Learning Outcomes:

- SLO1 Clearly define an industry problem with appropriate set of objectives (C.1)
- SLO2 Assess, adapt, and recommend the most suitable methodology to guide the industry project and plan to achieve defined objectives (C.1)
- SLO3 Synthesize a range of tools and techniques in order to design and develop creative and innovative solution to the identified industry problem (D.1)
- SLO4 Construct written, spoken, and visual communication with accuracy and clarity to effectively communicate innovative outcomes (E.1)
- SLO5 Critically evaluate, peer-review, reflect and communicate the learning process (F.1)
- SLO6 TBC (B.1)

Type: Project

Groupwork: Individual

Weight: 40%

Length: Part 1: 2,000-4000 words, excluding references.

Feedback: Part 2 of Product 1 will be assessed by lecturers within 2-3 weeks and the feedback will be provided later.

Assessment task 4: Self-Reflection and Peer Review

Description:

This assessment is to provide opportunities for students to report and justify their individual contributions to the team, with self-reflections of their learning experience, self-development, and teamwork experience, and peer review the contributions of other team members. The Self-Reflection and Peer Review is to an online assessment, including two parts:

1. Self-Reflection on the own experience of students, including
    - Completion of team responsibility (highlighting challenges, efforts to handle the challenges, the lessons learned from the efforts, and future improvements)
    - Team collaboration experience (enjoyable moments, barriers, resolutions, etc.)
    - Self-development and learning experiences

2. Peer Review other team member's commitment and performance in the team from the following aspects:
    - Commitment to team responsibility
    - Team collaboration (attitudes, manners, communication styles, etc.)

Evidence quoted/cited must be from AT1 Team Progress Reports. This assessment will include an interactive oral viva component.

Learning Outcomes:

- SLO4 Construct written, spoken, and visual communication with accuracy and clarity to effectively communicate innovative outcomes (E.1)
- SLO5 Critically evaluate, peer-review, reflect and communicate the learning process (F.1)
- SLO6 TBC (B.1)

Type: Reflection

Groupwork: Individual

Weight: 20%

Length: 1,000-2,000 words

Academic Integrity

Academic integrity is about demonstrating honesty, trust, fairness, respect, responsibility and courage in your studies and assessments. Studying at UTS and being part of our community means maintaining these values and acting with academic integrity at all times. Find out everything you need to know about academic integrity at UTS.

Assessment Procedures

All staff and students involved in the assessment of coursework subjects at UTS are subject to the Coursework Assessments Policy. The policy applies to the assessment of all coursework

© University of Technology Sydney

subjects. This policy does not apply to thesis subjects that are taken by students enrolled in research degrees but does apply to any coursework subjects undertaken by research degree students. It does not describe policy that relates to academic progression through a course of study. The policy should be read with the Coursework Assessments Procedure and the Student Rules.

Information last updated 22 October 2026.
